

Analytics. Recommendation. Action.

## Your Network Has Changed

Our customers tell us their networks are getting more complex every day. More locations, more apps, more users, more devices – more problems.

Whether you're an enterprise, an educational institution or a service provider, the problems you deal with on a day to day basis are getting harder to solve. Traditional WAN solutions weren't designed to solve problems in the cloud, or on mobile devices or for streaming video. Traditional solutions just aren't enough anymore to control WAN costs, troubleshoot network problems quickly, prioritize resources for key applications, support critical IT projects and ensure users make appropriate use of the network.

We designed Exinda Network Orchestrator to help you solve the problems you face in your network today – not 10 years ago.

A change in approach is needed to proactively manage today's network. As a result of increased user and application complexity, solving our most pressing IT problems is becoming a bigger challenge. To pragmatically solve network management issues, IT needs to think beyond traditional WAN solution approaches. Network managers must intelligently coordinate all aspects of their WAN environment."

Zeus Kerravala, Principal Analyst at ZK Research

## Exinda's Orchestration Solution

Exinda Network Orchestrator is the world's first solution designed to coordinate users, devices, applications and activities across all your network locations. It is designed to help Network Managers and Administrators solve their most pressing IT problems in today's complex network. Traditional WAN solutions are no longer able to address the scope and complexity of the challenges we face in the modern network environment.

Exinda's award winning technology combines real time monitoring, best in class analytics, purpose-built reports, an intelligent recommendation engine and powerful actions like shaping and optimization. Our integrated feature set was architected to address the new set of problems networks are facing, and to coordinate the chaos in your IT environment.

See how Exinda's Network Orchestrator is helping over 3,500 companies around the world orchestrate their networks.

## Key Benefits

### TROUBLESHOOT PROBLEMS FASTER

Network administrators using Exinda diagnose and resolve problems 3X faster. Troubleshooting issues with our intuitive library of purpose built reports, powerful analytics and innovative recommendation engine makes finding and fixing network issues easier.

### REDUCE OVERALL NETWORK COSTS

Exinda customers typically lower WAN costs by up to 40%. After 90 days using Exinda you will be able to defer your next bandwidth upgrade, make your users more productive, improve voice and video quality, and make applications faster. All of which will lower your overall network costs.

### ENSURE RESOURCES FOR KEY APPLICATIONS

Network managers using Exinda meet application SLAs every time and can reduce user complaints by up to 75%. With Exinda you have visibility into how every application is performing and how resources are being consumed, as well as the power to guarantee bandwidth for your most important apps.

### ENFORCE APPROPRIATE USE OF THE NETWORK

Immediately stop peer to peer and streaming video from hogging your bandwidth. With Exinda, you can easily find recreational traffic, identify problem users, web sites and applications, and apply policies to control who and what can use bandwidth on your network.

### SUPPORT CRITICAL IT PROJECTS

Make data center recovery, consolidation and unified communications projects more efficient. With Exinda you get insight and analytics to understand how your network will react to change and the ability to adjust policies to accommodate new usage patterns and applications.

## Key Features

### REAL TIME MONITORING

Monitor the health of your network in real time. Gain insight into the amount of resources being consumed by all users, applications, locations and devices across the network.

### INTERACTIVE ANALYTICS

Analyze, and inspect application traffic at layer 7 so you can troubleshoot issues quickly when they arise. View innovative dashboards to see network activities across all users, applications, devices, and locations. Model and interact with data to better understand the health of your network and critical applications.

### PURPOSE BUILT REPORTS

Browse our solution center featuring a library of reports designed to help solve your most important IT issues. View a catalogue of reports for WAN Planning, Application Performance, Network Governance and Critical IT Projects.

### RECOMMENDATION ENGINE

Our patent-pending recommendation engine studies patterns and changes in your network. It discovers potential problems before they occur and automatically makes suggestions to repair issues, adjust policies, and optimize network performance.

### POLICY BASED SHAPING

Our award winning traffic shaping technology lets you prioritize how and when users, applications and web sites consume bandwidth on your network. Integration with Active Directory means you can control bandwidth by user, group and location as well.

### APPLICATION ACCELERATION

Make sure your applications always deliver a great user experience. Premise, cloud and mobile apps all need to deliver reliable performance for your business to run smoothly. Our acceleration technology makes sure your business-critical apps are always lightning fast.

## The Exinda Difference

Exinda Network Orchestrator is truly unique. It was designed from the ground up to solve the problems networks are facing today – not 10 years ago. Unlike traditional WAN Optimization appliances that only focus on making the network faster, Exinda’s unique WAN Orchestration solution focuses on making the network more reliable, more productive and faster too. Our central management system lets you control your entire network estate from one central console. Exinda provides the only solution on the market that combines Analytics, Recommendation and Action all in one platform.

## To Learn More

Exinda Network Orchestrator is designed to scale to fit your business needs. We have solutions for the smallest branch office and the largest data center. Exinda is the leading global supplier of WAN Orchestration solutions. Exinda enables educators, enterprises and service providers to ensure a predictable user experience for strategic business applications through policy-based shaping, actionable analytics, and automated recommendations.
