

WAN - Internet

Exinda Networks is a leading global supplier of high quality network performance optimization and monitoring systems. Exinda's products offer network data optimization, traffic reporting and application acceleration that allow enterprises to ensure its network operation is matched to the business needs. www.exinda.com

ContentKeeper Technologies is the leader in scalable, fault-tolerant, enterprise Internet filtering solutions. Their ContentKeeper Web product assists enterprises to Monitor, Manage, Control and Secure their use of Internet resources through granular, flexible and customizable Internet filtering. www.contentkeeper.com

Easy, automatic email archiving The Plug n Comply™ Family of appliances are designed to capture all incoming, outgoing, and internal messages, check all captured messages against user defined rules, flag and notify any violations, as well as index and store messages for future search and retrieval. www.Jatheon.com

Xtera specializes in network infrastructure. Their AscenLink aggregates multiple leased and broadband lines to increase WAN bandwidth. It distributes traffic across multiple inexpensive ISP lines like DSL or Cable Modems to deliver speeds comparable to costly leased lines such as E1/T1 or T3. www.xtera.com

Stonesoft Corporation is an innovative provider of integrated network security solutions including StoneGate firewalls, Site to Site VPN, Intrusion Protection Systems, Server Load Balancing and SSL. These products work together to provide intelligent defense all over the enterprise network. www.stonesoft.com

Security

Sanctuary Device Control, (Lumension Security) eliminates data loss from removable devices through the policy-based enforcement of device use to control the flow of inbound and outbound data from your endpoints. Control and manage any I/O devices, encrypt removable media and enable Regulatory Compliance. www.lumension.com

ForeScout's Network Access Control (NAC) delivers uniform policy enforcement across all network devices. Clientless and transparent to the end user, ForeScout's NAC features a wide range of response options to policy violations, to combine an unprecedented level of security and business continuity. www.forescout.com

Extreme Networks offers a wide range of wired and wireless network infrastructures including Core and aggregation switching solutions, Port extenders, Scalable wireless LAN solutions and security products. Customers include corporate enterprises to large universities and Governments worldwide. www.extremenetworks.com

Server Technology, Inc. designs and manufactures power distribution products to reduce downtime and improve data center power management. Intelligent Power Distribution Units provide power management via IP, branch circuit protection, input current power monitoring, environmental monitoring, serial console port access. www.servertechology.com

Infrastructure

Avocent is a leading global provider of IT infrastructure management solutions for enterprise data centers, small/medium businesses and branch offices. Products include local and remote switching, serial console servers, digital extension, embedded (IPMI), service processor managers, wireless, mobile and video display solutions. www.avocent.com

AKCP is a manufacturer of SNMP-based environmental and security monitoring solutions. The sensorProbe, can be connected in any combination to monitor temperature, humidity, water leakage, Airflow including long term graphing, security, detect AC Power Line Voltage, Digital Voltmeter, control relays, and much more. www.akcp.com

IMC Networks is a leading manufacturer of optical access and media conversion solutions for LAN, MAN and FTTx applications. With millions of products shipped, IMC Networks' solutions have been deployed in enterprise, government, education and service provider networks worldwide. www.imcnetworks.com

PowerDsine (MicroSemi) is a leader of the fast-growing Power over Ethernet (PoE) technology that allows power to be transmitted over the same network cable as data. www.microsemi.com/PowerDsine

Mobile

Mi-Token is an evolutionary two factor authentication solution. Mi-Token is totally token independent which means it works with your Smartphone and a broad range of tokens. Mi-Token also provides soft tokens for phones and offers simple token management integrated with Active Directory. www.mi-token.com

Mobile Active Defense is a Compliance and Security solution that secures your mobile devices by locking down iPhones, iPads as well as smart phone and tablet devices while not changing the user experience or causing any noticeable latency whatsoever. www.mobileactivedefense.com
